

My Personalized Claude Strategy

A complete AI-powered operating system for learning, coding, career growth, and placement — built for a B.Tech CSIT first-year student.

📖 B.Tech CSIT · Year 1

📁 Placement Focused

🏆 Hackathon Ready

⚙️ React + DSA

📅 60-Day AI Challenge

STRATEGIC ANALYSIS

💪 STRENGTHS

- Full-stack curiosity (frontend + ML + DSA)
- Already building real projects
- Strong brand awareness (LinkedIn + GitHub)
- Consistent 4hr/day self-study
- Multi-modal learner — adapts fast

⚠️ WEAKNESSES

- Writing code without reference
- DSA concepts understood, not coded
- Decision paralysis with multiple tasks
- Over-reliance on AI output
- Trisem pressure disrupting consistency

🚀 OPPORTUNITIES

- Placement + Freelancing dual path
- 60-Day Challenge = strong portfolio
- React demand is extremely high
- Early GitHub activity = recruiter magnet
- Hackathons = fast skill acceleration

⚡ RISKS

- AI dependency without deep understanding
- Trisem workload causing burnout
- No clear daily priority system
- Shallow project depth vs broad topics
- Missing DSA fundamentals for interviews

📊 CURRENT SKILL RADAR

CAREER GOALS

Campus Placement

Target: Product companies in 2.5 yrs

Freelancing

Frontend + React client projects

Hackathons

Fast prototyping + team skills

Your Hidden Advantage

You're building real-world projects AND studying ML + DSA simultaneously in Year 1. Most students don't start this early. This is your moat.

CLAUDE MODEL BLUEPRINT

★ PRIMARY

Claude Sonnet

Your daily workhorse model

- React component building
- DSA concept explanations
- Code review & clean code
- Assignment writing
- GitHub README drafting

Claude Haiku

Fast answers, save limits

- Quick syntax questions
- Prompt refinement
- "What does this error mean?"
- Simple concept lookups
- Daily schedule planning

Claude Opus

Save for heavy thinking

- Full project architecture
- Resume + ATS strategy
- Complex algorithm logic
- Interview preparation plan
- Career roadmap review

EFFORT LEVEL GUIDE

LOW EFFORT

Quick questions, syntax checks, "what is X", copying prompts. Use Haiku here to save limits.

STANDARD

Writing code modules, explaining concepts, assignment drafts, README files, LinkedIn posts.

HIGH EFFORT

Full React components, DSA problems, project debugging, resume optimization, interview Q&A.

MAX EFFORT

Full system design, career planning, hackathon strategy, complex ML pipelines, job applications.

DAILY WORKFLOW SYSTEM

6:20 AM	 Morning Kickstart (20 min before college)
	Review today's 3 priority tasks Quick DSA problem (easy)
8–4 PM	 College Hours
	Note confusing concepts Collect assignment requirements Jot project ideas for evening
5–6 PM	 Decompression Buffer
	Rest — NO studying, NO screens Plan evening tasks mentally
6:20 PM	 Deep Work Block 1 — DSA (75 min)
	Ask Claude to explain concept simply Try coding WITHOUT looking Then check with Claude
7:45 PM	 Deep Work Block 2 — Project (90 min)
	Build 1 React component/feature Write own flow first, then Claude review Push to GitHub
9:15 PM	 Assignments + LinkedIn (30 min)
	Academic tasks (Sonnet) Post 1 LinkedIn update
9:45 PM	 Night Wrap-up (15 min)
	Log what you learned Set 3 tasks for tomorrow

TASK RECOMMENDATION MATRIX

TASK	MODEL	EFFORT	EXPECTED OUTCOME
DSA concept explanation	Sonnet	Standard	Simple, no-jargon explanation you can code from
React component building	Sonnet	High	Production-ready component with props & state
Debug an error	Haiku	Low	Root cause + fix in under 2 min
Write trisem assignment	Sonnet	Standard	Structured, readable, marks-worthy answer
Lab exam preparation	Sonnet	High	Step-by-step code walkthrough with explanations
Resume writing	Opus	Max	ATS-optimized, role-specific, recruiter-ready
GitHub README	Sonnet	Standard	Professional docs with setup, screenshots & badges
LinkedIn post	Haiku	Low	Engaging post draft in your voice
Project architecture planning	Opus	Max	Full folder structure, components map, data flow
Interview question practice	Sonnet	High	Mock Q&A with feedback and ideal answers
Code review (own code)	Sonnet	Standard	Clean code patterns, naming, structure fixes
Hackathon idea brainstorm	Opus	Max	5 feasible ideas with tech stack + differentiator
ML dataset cleaning	Sonnet	Standard	Pandas pipeline with comments you can own
Syntax question (quick)	Haiku	Low	Instant answer with 1-line example
Daily schedule planning	Haiku	Low	Clear timetable matching trisem + personal goals
ATS keyword optimization	Opus	Max	Resume rewritten to match JD keywords precisely
Project presentation slides	Sonnet	High	Structure + talking points + slide-by-slide content
Cold email to recruiter	Sonnet	Standard	Personal, concise, action-driving outreach
Research paper summary	Sonnet	Standard	Simple-language summary you can present
Career roadmap review	Opus	Max	Personalized path to placement with milestones

BIGGEST MISTAKES TO AVOID

01 Asking Claude to write full projects for you

Always write the flow or skeleton yourself first, then ask Claude to fill or review. You must own your code.

02 Copy-pasting without reading

Every Claude output you use must be read line by line. If you can't explain it, you don't own it.

03 Using Opus for every task

Save Opus for deep strategy. Haiku and Sonnet handle 85% of your tasks. You're wasting limits on small questions.

04 No task priority system

Before opening Claude each evening, write your 3 tasks on paper. Never start with "what should I do?" — that's decision paralysis.

05 Shallow prompting

Vague prompts = vague answers. Always include: your context, your skill level, what you've tried, and desired output format.

06 Skipping DSA to just build projects

Placement interviews are 70% DSA. Projects get you shortlisted; DSA gets you placed. Both are non-negotiable.

07 Not pushing to GitHub daily

Even 1-line change counts. Recruiter green squares = consistency signal. Use Claude to write commit messages if needed.

3-MONTH GROWTH ROADMAP

MONTH 1 — FOUNDATION

- Complete airline booking React app
- DSA: master trees + graphs concepts
- Code 2 DSA problems daily without reference
- Set up daily 3-task priority system
- Post 3x/week on LinkedIn

✓ Outcome: 2 polished projects + consistent GitHub activity

MONTH 2 — BUILD & COMPETE

- Participate in 1 hackathon
- Build new project (full-stack or AI-powered)
- DSA: sorting, searching, dynamic programming basics
- Write resume v1 with Claude Opus
- Start contributing to 1 open source repo

✓ Outcome: Hackathon experience + v1 resume ready

MONTH 3 — CAREER MODE

- Apply for internships / freelance gig
- Mock interview sessions with Claude
- DSA: solve 50 Leetcode problems
- ATS-optimize resume for 3 specific roles
- Reach 500+ LinkedIn connections

✓ Outcome: Interview-ready profile + 1 offer/project

📌 Your Claude Prompt Formula (use every time):

Context: "I'm a first-year CSIT student building [X]"
Skill Level: "I know [Y] but am learning [Z]"
What I tried: "I tried [my approach] but got [error/problem]"
Output format: "Explain simply, no jargon, show code I can type myself"

🔄 Workflow: Task → Model Decision Tree

NEW TASK arrives

- | Quick answer needed? (< 2 min) → Haiku · Low Effort
- | Code / Concept / Assignment? → Sonnet · Standard-High
 - └ Write your attempt FIRST, then Claude reviews
- | Strategy / Resume / Full Design? → Opus · Max Effort

AFTER Claude responds:

- | Read every line. Can you explain it? → ☒ Use it
- | Don't understand part? → 🔄 Ask Claude to explain that part
- | Push to GitHub → 📄 Post update on LinkedIn

⚡ FINAL VERDICT — YOUR 90% SOLUTION

MODEL

Sonnet

Best balance of intelligence & limit efficiency

EFFORT LEVEL

Standard

Thorough without burning through tokens

PROMPT STYLE

Simple

"No jargon. Explain like I'm new. Show example."

Why this works for you specifically: Claude Sonnet at Standard effort is intelligent enough to explain DSA clearly, generate React components, and write readable code — while being efficient enough that you won't hit limits mid-session. Since your biggest struggle is *understanding before copying*, always add "explain each line simply" to your Sonnet prompts. This forces Claude to teach, not just generate. Save Opus for once-a-week strategic sessions (resume, career plan, project architecture). Use Haiku for all quick questions and LinkedIn drafts.

Portfolio Submission Ready
